- Legal Risk
- Sensitive content
- Security Risk
- Privacy
- Bandwidth
- Business Services
- Education
- Consumer Services
- Leisure and Social Activities
- Others

High quality classifications

Every web page classification undergoes a dual analysis: automatic and human. Our powerful analysis algorithm, enriched by our linguistic and data science expertise, processes new URLs to obtain extremely high-quality pre-ranking results. Each categorized content is then manually reviewed by an Olfeo expert.

Global coverage

We categorize data sources from the top visited websites anywhere in the globe. By bringing cultural relevance and regional understanding to our data, we ensure that your network and application solutions resonate with users worldwide.

On-demand additions to our database

The internet changes, and so might your needs. That is why we offer an on-demand domains and applications additions to keep our database always tailored and comprehensive to your use case.

Use Cases

Cybersecurity

Protect devices and networks against potential breaches! Administrators can define access restrictions to detect and prevent users from accessing sites of harmful categories, like phishing or malware distribution.

Content Filtering for Internet Safety

Web categorization can also be used to enforce internet usage policies and create a safe online environment in organizations, schools, and public networks.

Suspicious behaviours

Analyze investigative data in greater detail to identify suspicious behaviors and get insights on users' interests based on browsing history or other data source.

Advanced Risk and Cost Management

By identifying applications that could pose performance or security risks, including Shadow IT, you can proactively safeguard your network. Our SaaS application dataset allows to identify unused or redundant applications, enabling you to optimize your resources and eliminate wasteful spending.
